

Minerva University *Brand Standards*

Updated Fall 2025

MINERVA[®]
UNIVERSITY

Logo

Logo

Logo Components

The Minerva University logo is made up of three components: the master brand symbol, the master brand wordmark, and our institutional identifier. The two master brand components are registered trademarks in the U.S. and abroad, as is the Minerva University name.

The components appear together with a specific size relationship, positioning, and spacing. Do not reproduce the logo or individual components in any way other than those described in these guidelines.

Master Brand Wordmark

MINERVA[®]

Institutional Identifier

UNIVERSITY

Logo

Logo Configurations and Variations

There are two main configurations of the Minerva University logo: a preferred vertical configuration, and a horizontal version, which should only be used when space is limited.

Each configuration can be reproduced in either black (on white or light backgrounds), or white (on black or dark backgrounds).

The official insignia, which does not include the institutional identifier (“University”) is reserved for special uses, such as student diplomas.

The tagline configuration should be used in instances where you are introducing the brand, communicating to new audiences, or want to reinforce the core message. This would include external marketing and advertising pieces, and the website home page. If using the logo multiple times within the same piece (i.e. a multi-page document), the tagline configuration should only be used once, preferably placed at the primary entry point for immediate visibility.

Do not use logo configurations or variations other than those shown at right.

Preferred Configuration (black)

Preferred Configuration (white)

Tagline Configuration

Logo

Minimum Clear Space

To present the Minerva University logo effectively it is necessary to maintain a minimum amount of space around it that is clear and free of other graphic elements.

This minimum clear space allowance is defined using the height of the capital letters in the master brand wordmark, which is given the value “x”. The clear space surrounding the logo is 1.5x, or 1^{1/2} times x.

Minimum Clear Space

Logo

Sizing and Minimum Size

The digital artwork files for the Minerva University logo are sized with the master brand wordmark at 100 points. This helps make proportional scaling of the logo straightforward. For example, to reproduce the logo with the wordmark at 18-point size, simply scale the entire logo to 18%.

Never scale the logo artwork smaller than 9%. This maintains readability at the minimum logo size, where the wordmark is 9-points and the complete logo is .65 inches tall (16.5 mm). Always scale the logo proportionately (with the relationship between height and width maintained).

Do not reproduce the logo at sizes smaller than .65 inches tall.

Wordmark: 24-point size (24%)

• MINERVA[®]
UNIVERSITY

Wordmark: 18-point size (18%)

• MINERVA[®]

Logo Usage

Inappropriate Logo Use

In order to ensure consistent presentation of the Minerva logo and brand identity, do not recreate, alter, or stylize the logo artwork in any way. Be sure to scale the logo uniformly (maintaining its proportions) to avoid distortion. Reproduce the logo using only digital files supplied by Minerva Project, ensuring sufficient visual contrast, clear space, resolution, and fidelity.

- Do not reproduce the logo in colors other than black or white.
- Do not rotate, crop, or distort the logo.
- Do not add visual effects or other graphic elements to the logo.
- Do not reconfigure or change the size relationship of the logo components
- Do not separate the logo elements.
- Do not place the logo on backgrounds that are busy or visually complex
- Do not place the logo in container shapes.

Do not reproduce the logo in unapproved color

Do not rotate the logo

Do not crop the logo

Do not add outlines or strokes to the logo

Do not add effects or drop shadows to the logo

Do not modify elements of the logo

Do not distort the logo

Do not reconfigure the logo components

Do not alter the size relationship of the logo components

Do not use the logo components separately

Do not place the logo on busy backgrounds, photos, or patterns

Do not place the logo in a container shape

Logo Placement

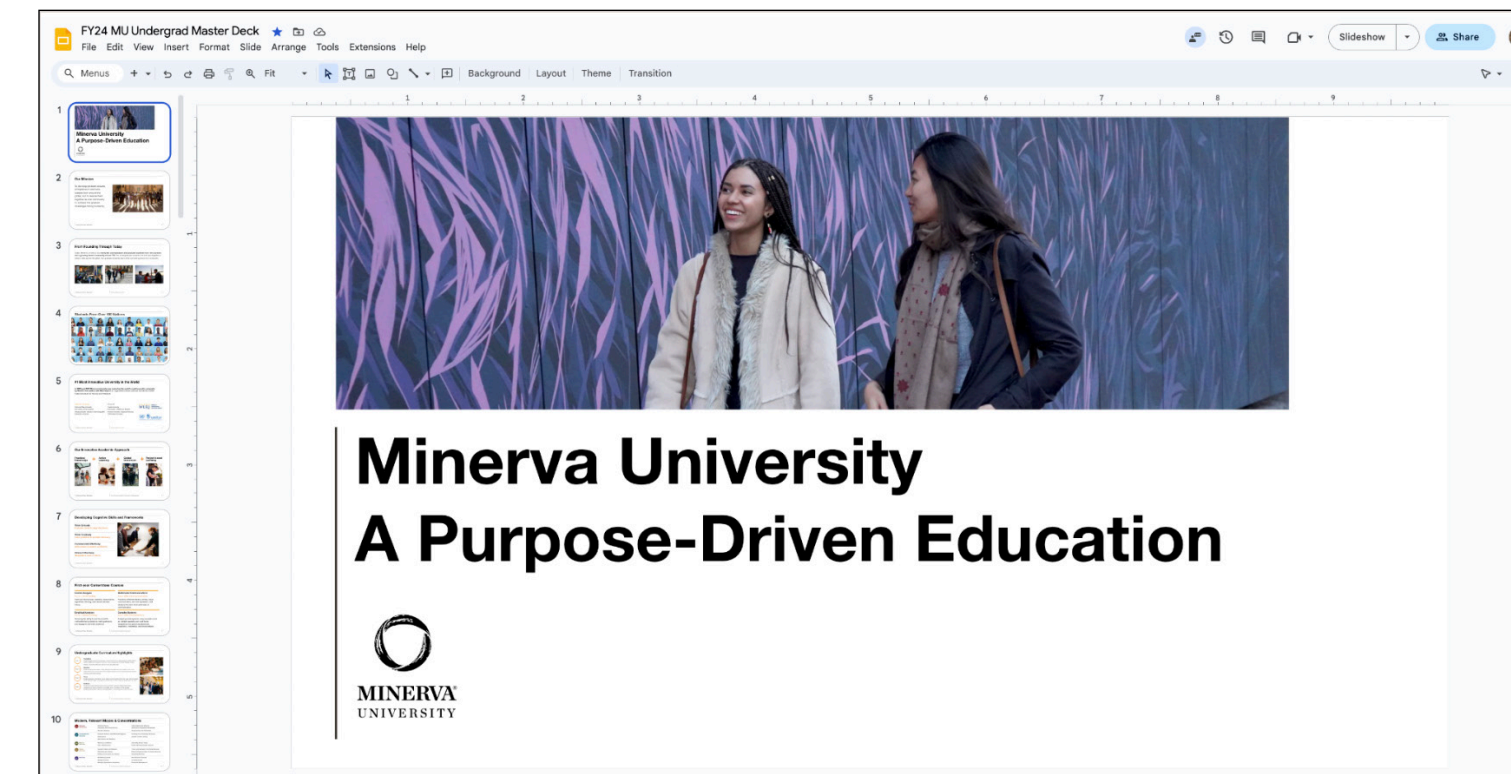

Since our brand identity appears across countless applications, we do not mandate a single, fixed placement for the logo. Instead, all designs must adhere to the following General Placement Principles to ensure consistent brand recognition and impact.

Prioritize Primary Contact Points

The logo must be present on the first page or primary entry point of any multi-page or multi-screen document. This ensures immediate brand association at the beginning of the user experience.

- **Multi-Page Documents & Reports:** Logo is mandatory on the cover/title page.
- **Slide Decks (Powerpoint/Keynote):** Logo is mandatory on the Title Slide. For all subsequent internal slides, either the university's name or the logo should be present in a consistent, non-distracting location (e.g., top-left or bottom-right corner of the slide master).
- **Email Marketing:** Logo must be clearly visible in the header/masthead area.
- **Single-page pieces:** Logo must be present on every single-page design that represents the university, such as letterheads, business cards, invoices, and legal contracts.

Logo is placed
on the first slide
in the deck

Logo is placed
on the cover of
a multi-page
brochure

Logo Placement

Visibility in Recruitment Materials

When communicating with prospective students, parents, or partners, the logo's placement must be prominent and prioritized.

Rule of First Glance: In marketing materials designed for new audience acquisition (e.g., ads, landing pages, pitch documents), the logo should be one of the first visual elements registered by the viewer's eye. Place it in a high-visibility area (typically the top-left or centered top banner).

Internal Communications

For materials distributed primarily to an internal audience or hosted on our own branded channels, the logo can be secondary to the content.

- **Internal Communications:** On internal memos, training documents, or HR materials, the logo should be present but can be sized or placed more discretely (e.g., in a footer) to let the core message take prominence.
- **Company Social Channels:** When posting on our official social media profiles (e.g., Instagram, LinkedIn, X, YouTube), the profile picture serves as the primary logo identifier. Therefore, including the logo on the individual graphic is optional and should only be done if it adds to the design, not as a mandatory requirement.

Logo is placed top left on this marketing flyer to ensure high visibility.

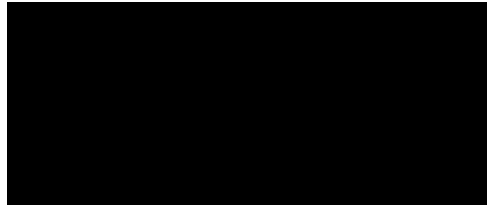

Color

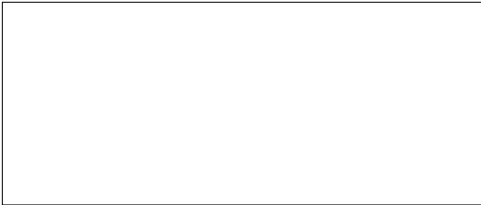

Primary Color Palette

Our primary color palette is used across media and includes Obsidian, White, Goldenrod, Tangerine, Clay and a range of warm grays.

Backgrounds are most often Obsidian, White, Charcoal, Slate, Bone, or Ivory. Goldenrod, Tangerine, and Clay are typically used as accent colors, to highlight text or graphic elements, such as buttons and links

P1-1 C / P179-1 U

Primary Color Usage

Backgrounds

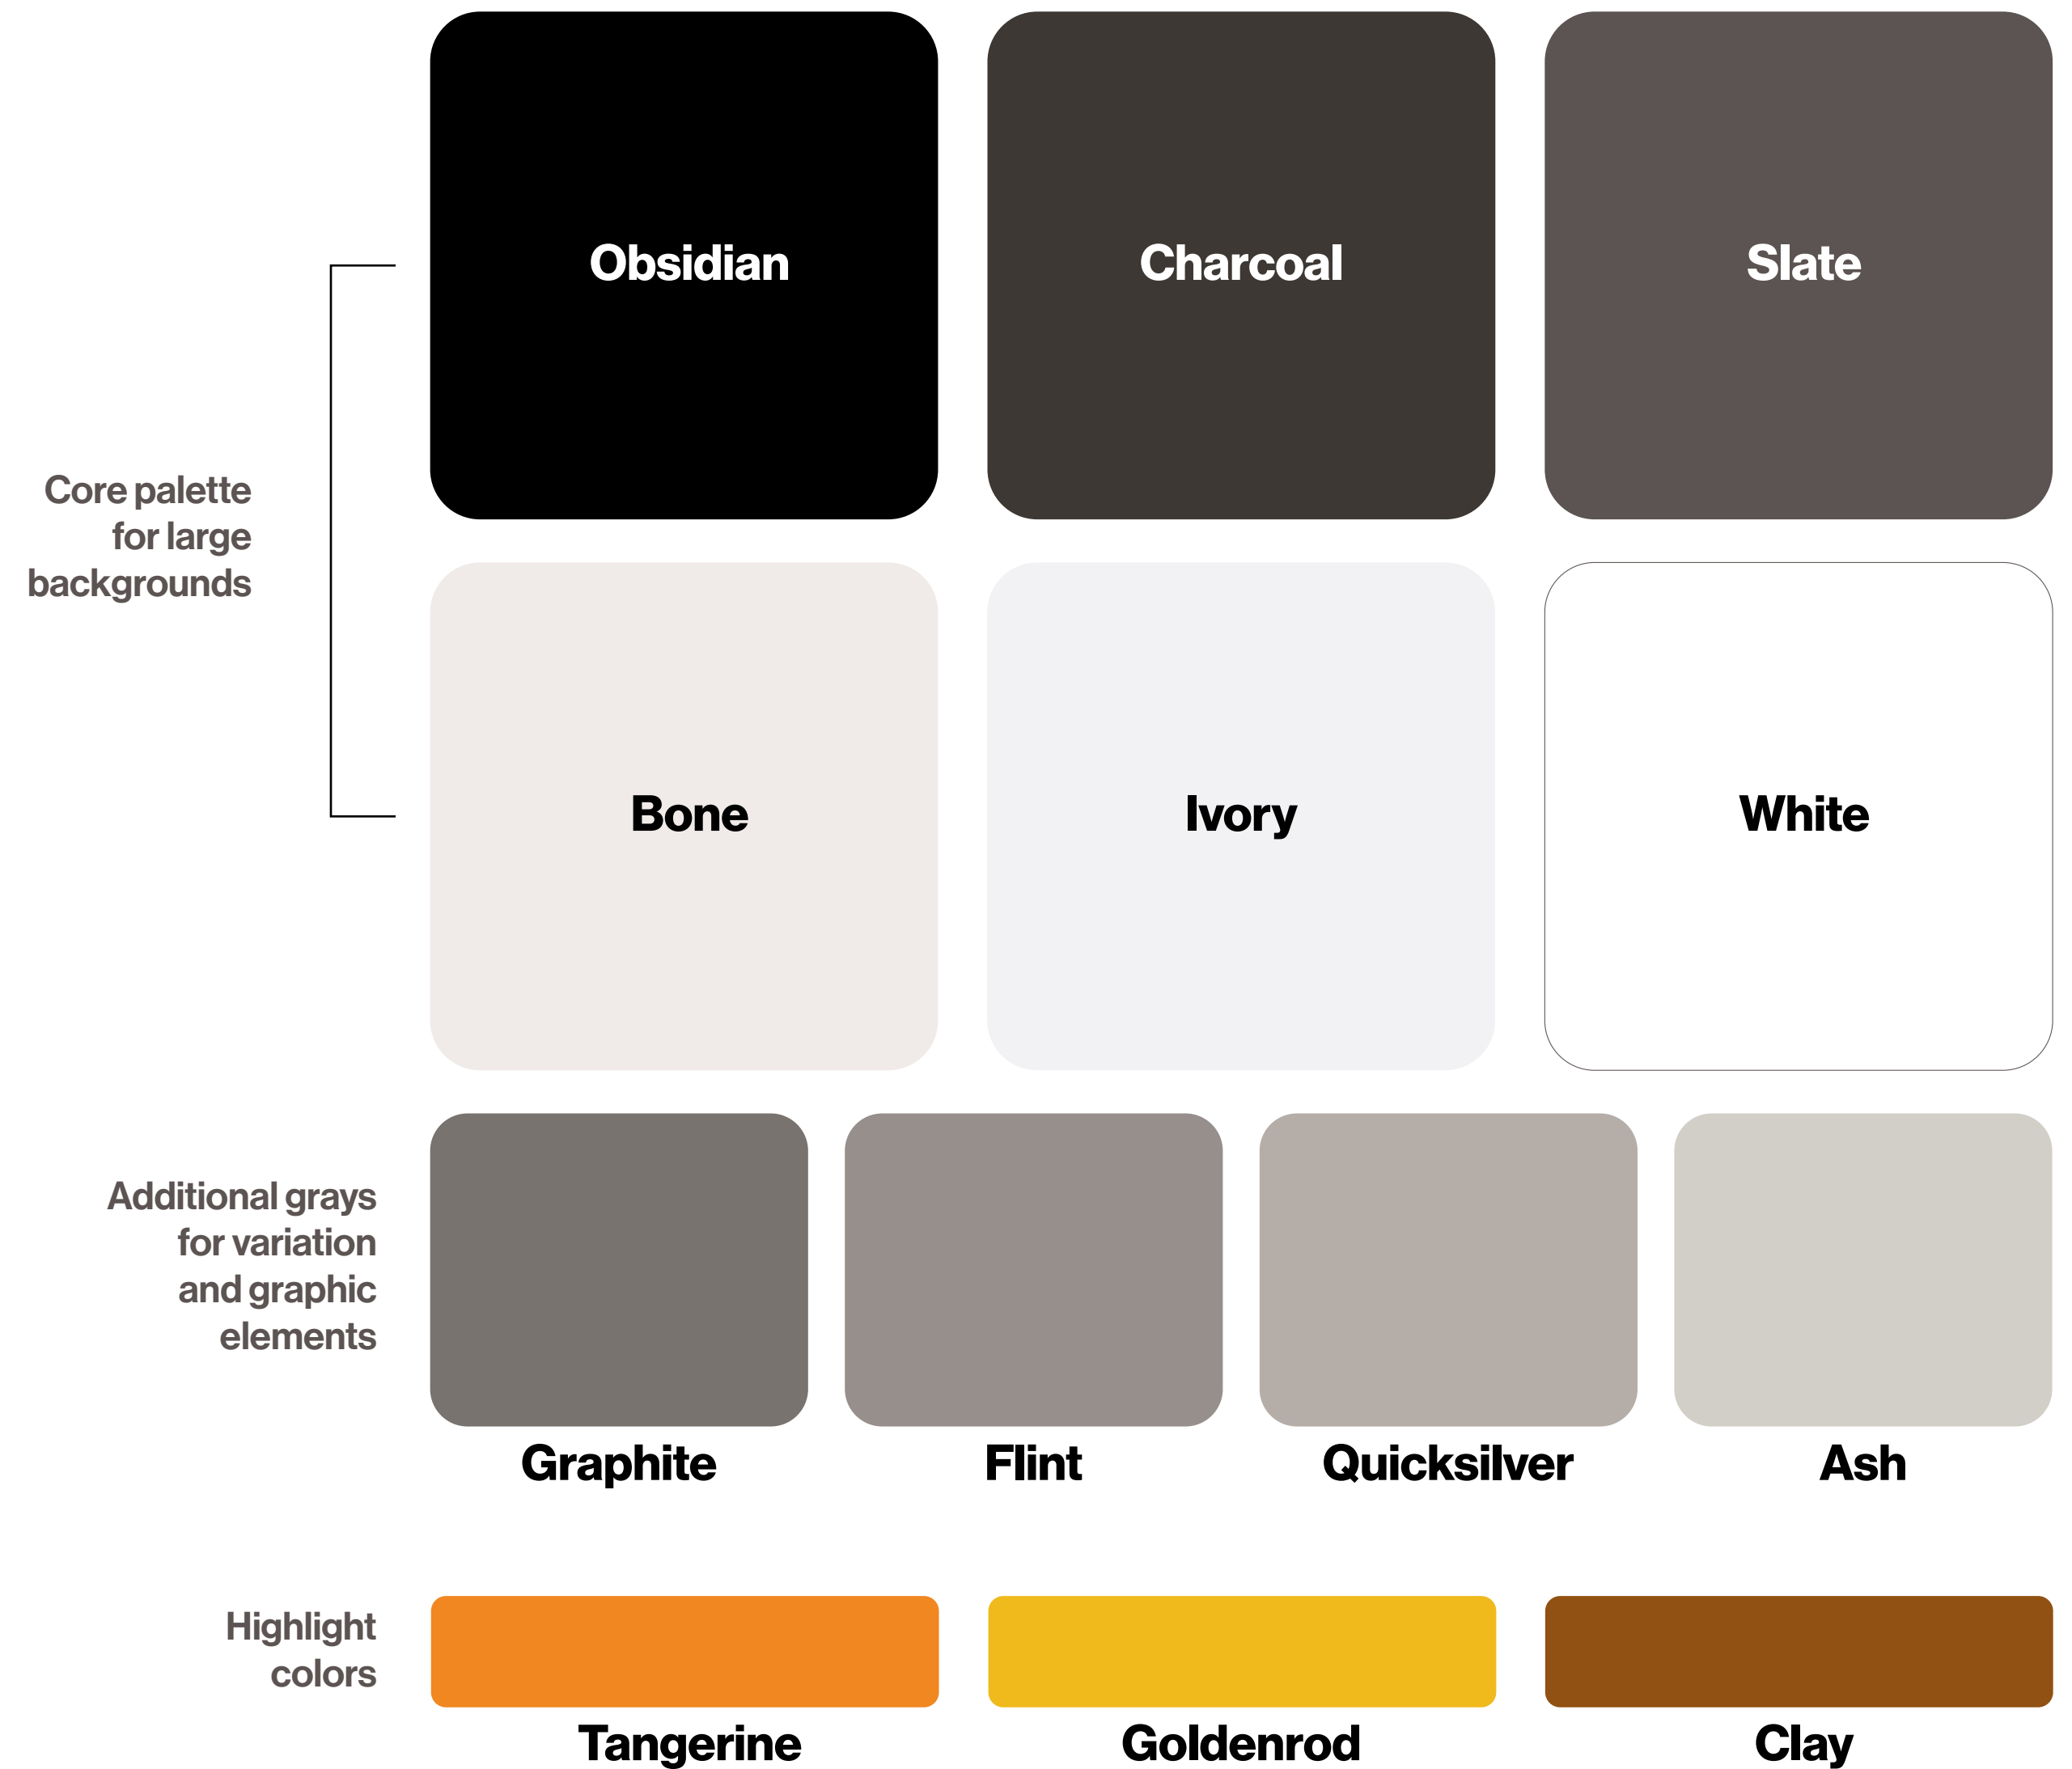

The ratios to the side illustrate the amount of each color that should appear in any asset. Obsidian, Charcoal, Slate, Bone, and Ivory together with White form the core of the palette and should be used in the highest concentration.

The medium grays can be used for variation, no more than about **50%** of the rate of the core background palette.

Highlight Colors

Clay can be used for text on White, Ivory, and Bone backgrounds, with Goldenrod and Tangerine reserved for highlights, using these colors no more than **25%** of the rate of the core background palette.

Never use colors outside of this palette unless you have reviewed your work with a member of the Brand & Creative team.

Primary Color Usage

Visibility and Accessibility

When using the primary color palette, it's essential to ensure that color choices support accessibility and allow everyone to understand the content easily. This means selecting color combinations that meet accessibility standards for contrast so that all text and visual elements remain clear and readable.

Additionally, color should never be the only way information is communicated. Viewers must be able to understand the content even if they cannot perceive color. By pairing high-contrast colors and designing with multiple ways to convey meaning, you create content that is usable and inclusive for the widest possible audience.

See the following charts for text color combinations that meet these standards.

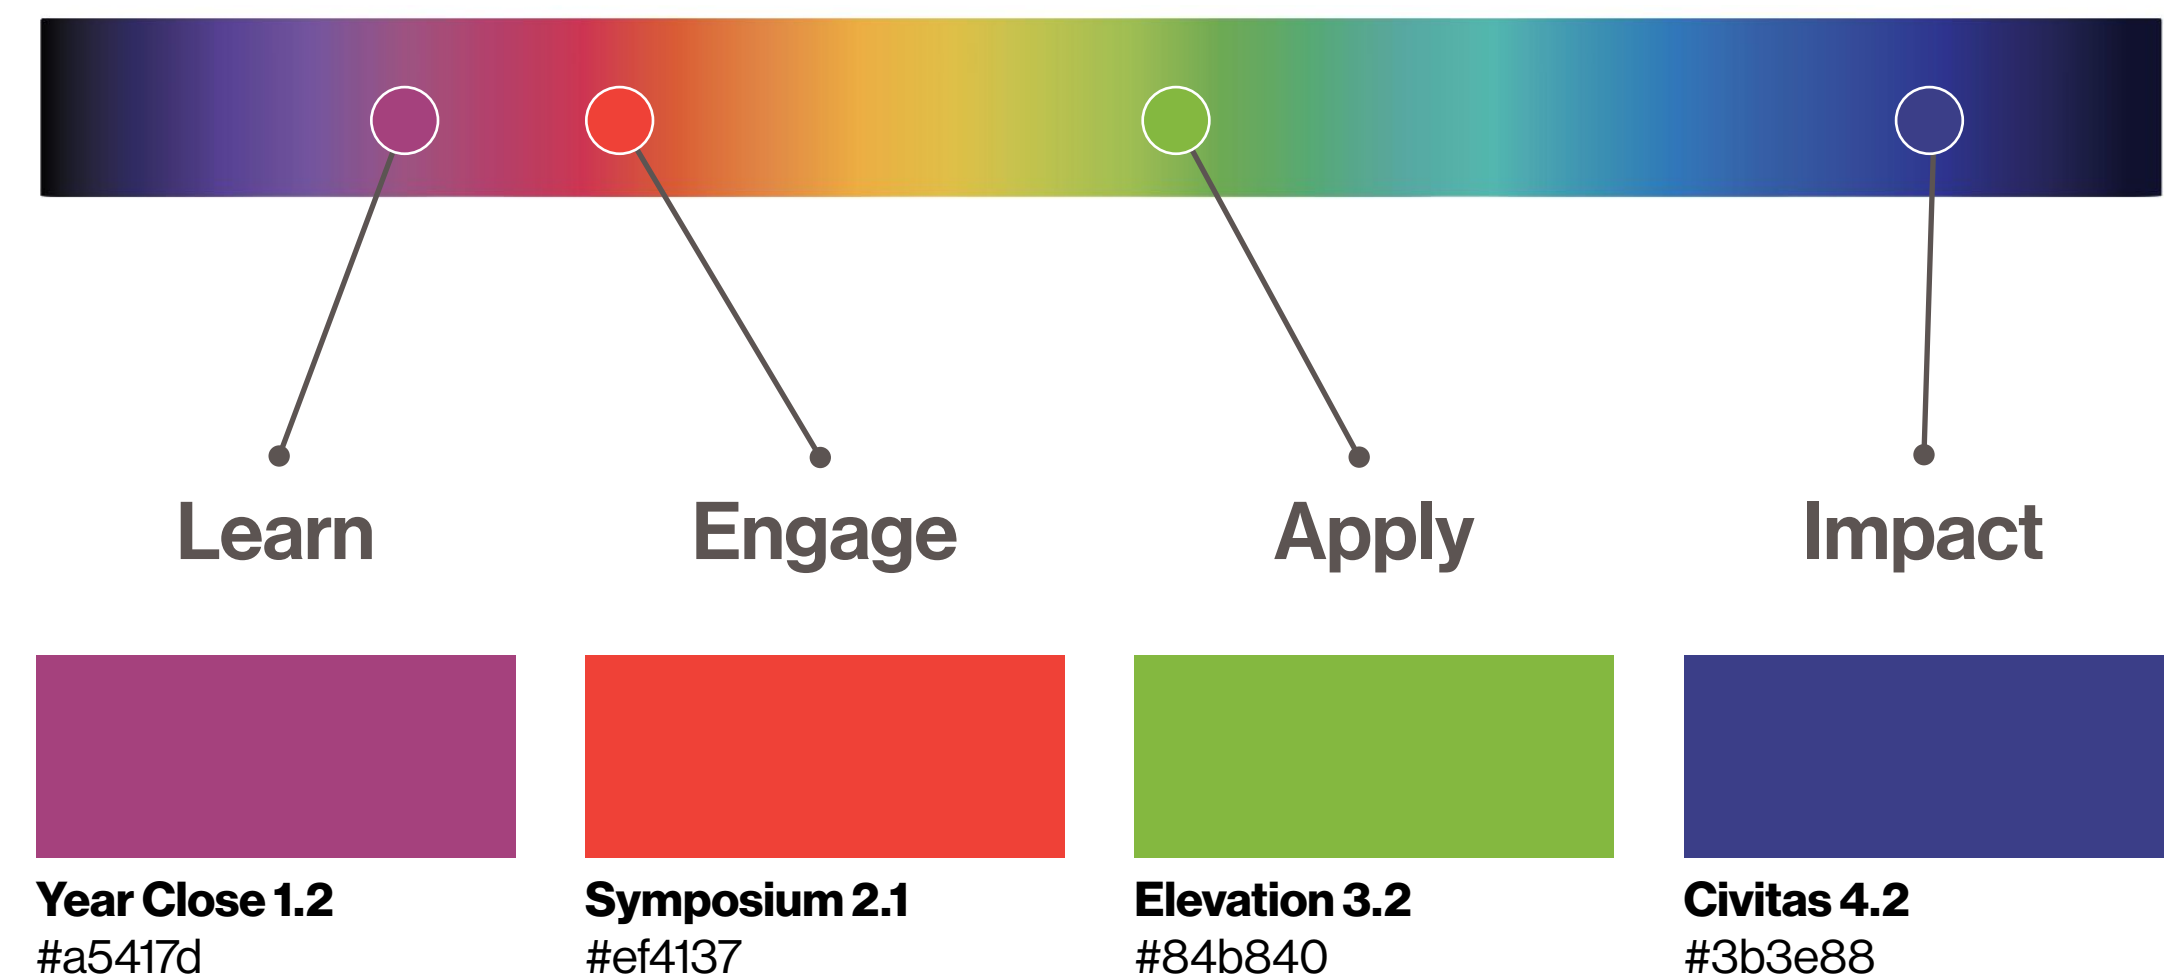

Primary Color Usage

Text Color Combinations Matrix

	Obsidian	Charcoal	Slate	Bone	Ivory	White	Quicksilver	Ash	Graphite	Flint	Tangerine	Goldenrod	Clay
Obsidian				Aa	Aa	Aa	Aa	Aa		Aa	Aa	Aa

Clay				Aa	Aa	Aa							

Student Journey Color Palette

We represent the student experience by using the metaphoric emergence from darkness into the light of practical knowledge and critical wisdom—represented as entering from darkness (Ascent) into a spectrum of color and reentry into darkness (Graduation) as the students, now containing the light of wisdom and knowledge, re-enter into the darkness of the world. The color spectrum was created to represent the vibrant energetic environment that is the four year undergraduate student experience. These should be used only in connection with the Student Life Team.

College Color Palette

Our newly updated college color palette was derived from nature and paired based on their nomenclature associations.

Arts & Humanities: Jasper a symbol of restoration and humanity

Computational Sciences: Fennel a symbol of strength, courage, trust, and stability

Natural Sciences: Nightshade a symbol of land, belonging to, sun, solace, and comfort

Social Sciences: Honey, Greek mythology, it was a source of wisdom and poetry passed on by bees

Business: Violet a symbol of ingenuity, visionary, and looking towards the future

Sustainability: Clay is a natural earth pigment, considered one of the oldest pigments known to humans.

Social Sciences  Honey #90702b	Computational Sciences  Violet #4a3279	Sustainability  Umber #944A20

Typography

Font Families

Minerva University uses two font families: Chronicle and Neue Haas Grotesk. The specific weights and styles of these fonts are available in the Monotype library we license through Minerva Project.

Substitutes

If Neue Haas Grotesk is not available for a specific application, use the Helvetica Neue family. If that is also not available, use standard Helvetica, or as a last resort, Arial. If Chronicle is not available, use the Garamond family. If that is not available, use Times New Roman.

Do not use any other fonts when developing communications or other materials for Minerva University.

abcdefghijklmnopqrstuvwxyz
ABCDEFGHIJKLMNOPQRSTUVWXYZ

Font Usage

See these examples and notes for how to pair the fonts together appropriately. (headers, subheaders, paragraph copy, etc)

Sizing

- Follow this scale for sizing:
- **H1:** at least 2.5x body copy size
 - **H2:** 1-1.5x body copy size
 - **H3:** 1-1.5x body copy size

- Body copy should be sized for readability based on the application:
- **Print:** 10-12pt
 - **Digital:** 14-18pt
 - **Large format:** Minimum letter height should equal 1/25 of viewing distance (*Example: For a sign viewed from 25 feet, minimum letter height = 1 inch.*)

Line Spacing and Alignment

- Maintain line spacing (leading) at 120–140% or of the font size. If using standard line spacing in a word processing program, use 1-1.5 line spacing.
- Align text left or flush-left ragged-right; avoid full justification.
- Centered text is acceptable for titles or short copy only.

HEADING 3

Heading 1

Heading 2

Paragraph copy

Captions

Level	Font	Weight	Use
Heading 1 (H1)	Chronicle Display	Light	Page titles, headlines, large signage
Heading 2 (H2)	Neue Haas Grotesk	Medium or Bold	Subheads, section titles
Heading 3 (H3)	Chronicle Deck	Roman (all caps)	Subheads, section titles
Body copy	Neue Haas Grotesk	Roman	Main paragraph text, other small copy
Captions	Neue Haas Grotesk	Medium Italic	Captions or highlighted text

Font Usage

Per application

- **Print materials:** Use the full type hierarchy
- **Web and digital:** Use the full type hierarchy; body text should never drop below 14 pt.
- **Signage:** Use H1 and H2 only; ensure maximum contrast for legibility.
- **Social graphics:** Use the sans serif font that's closest to H2 (bold, not condensed, not expanded, not italicized, not all caps) Prioritize clarity over hierarchy. Only graphics produced by the Brand and Creative team can use H1.

Print piece example

Introduction

The World's Most *Innovative* University

Minerva University is a fully accredited, non-profit university based in San Francisco, California, offering a unique global learning experience. Designed to develop the leaders and problem solvers of our future, our students spend four years traveling the world in a diverse cohort, with academic experiences powered by technology combined with on-the-ground experiential learning.

Our Community

91%

of our alumni are in full-time positions or in graduate programs

100+

nations connect our students and alumni

97%

of alumni held an internship prior to graduating

*Awarded by The World University Rankings for Innovation (WURI)

Font Usage and Accessibility

Understanding how color and size work together in typography is essential for creating clear, accessible content. This guide provides clarity on acceptable text and defines which text and background color combinations are accessible and when certain combinations should be avoided.

Text that is too small or low-contrast becomes difficult to read, especially for users with vision impairments. Both size and color must work together to support accessibility.

Please see the [Text Color Combinations Matrix on page 12](#) for approved color combinations.

Learn more about [Making Color Usage Accessible](#).
Check your color combinations using this [Color Contrast Checker](#).

Font Usage for Specific Applications

Website

- **For headers/hero sections** use Obsidian for the background or a combination of a photo with an Obsidian gradient overlay, so the text is as readable as possible.
- Since white text on a dark background can be harder to read, keep these sections to a maximum of two sentences, and never go below 14pt for body copy. For longer copy, choose a light background.
- Create variation in the pages by using the other approved background colors (Charcoal, Slate, Bone, Ivory, and White) to help create definition between the sections.
- Break up the copy by using charts, rounded corner shapes, and icons wherever it makes sense to help communicate the information.

Pull out select words in the header and italicize them for emphasis

Curriculum & Structure

The MDA curriculum is built around three core pillars:

Systems Thinking and Management Science:

Analyze complexity, evaluate trade-offs, and design more effective processes.

Data Analytics and Predictive Modeling:

Harness the power of data and AI to make informed, impactful decisions.

Applied Decision-Making:

Bridge decision science theory and practice with projects that address real-world challenges.

This program includes:

1	Six practical courses that sharpen creative and critical thinking, as well as communication skills.
2	Two analytical courses that strengthen data analysis, causal inference, and research design capabilities.
3	A master's thesis , completed independently with faculty guidance, demonstrating deep expertise in your chosen area of interest.

Font Usage for Specific Applications

Social Media

- To help create consistency among social media posts, use the same style of title for every post, varying the size and location.
- For posts designed by the Brand and Creative team, follow all rules for the typography hierarchy.
- For video posts like reels and stories, ensure that any text in your captions, cover or thumbnail photos uses accessible color combinations. For easier reading over video, add rounded corner boxes behind your text.

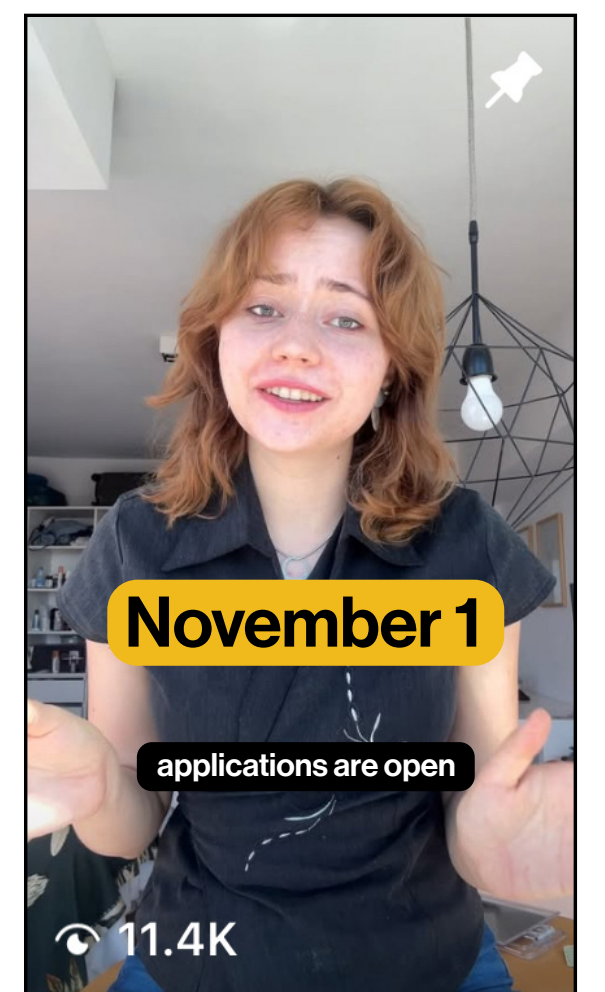

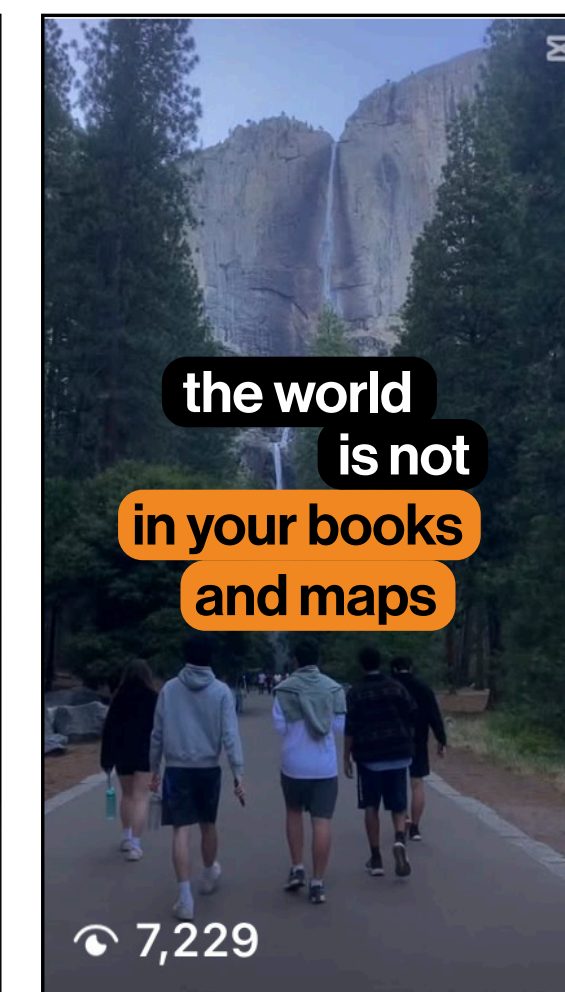

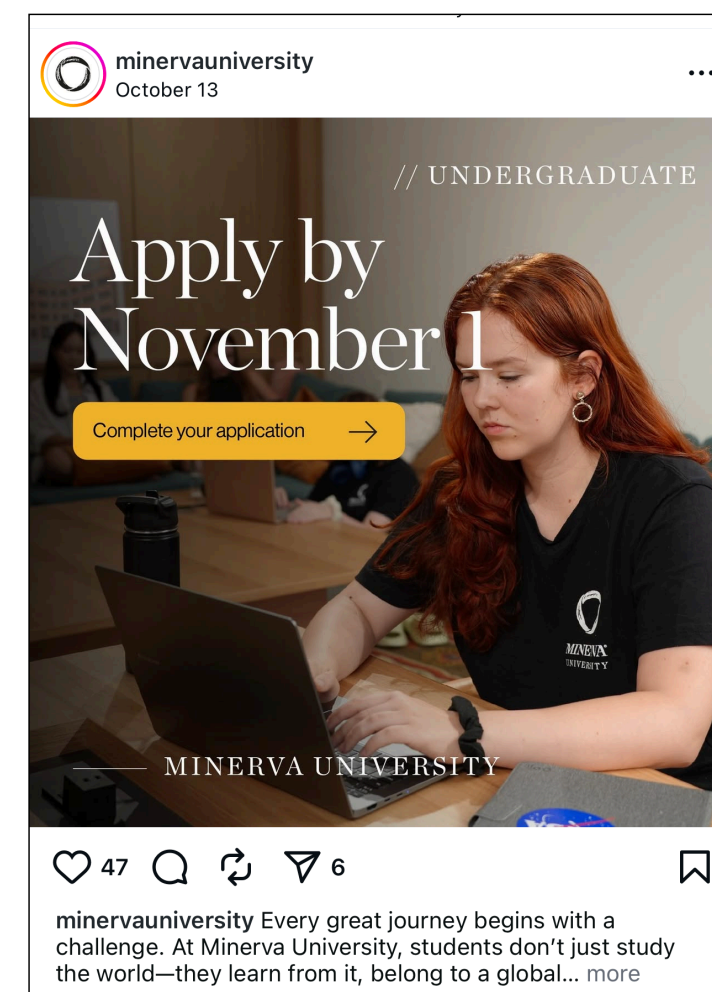

Substitutes

If Neue Haas Grotesk is not available for a specific application, use the Helvetica Neue family. If that is also not available, use standard Helvetica, or as a last resort, Arial. If Chronicle is not available, use the Garamond family. If that is not available, use Times New Roman.

YouTube Thumbnail examples

Instagram examples

Font Usage for Specific Applications

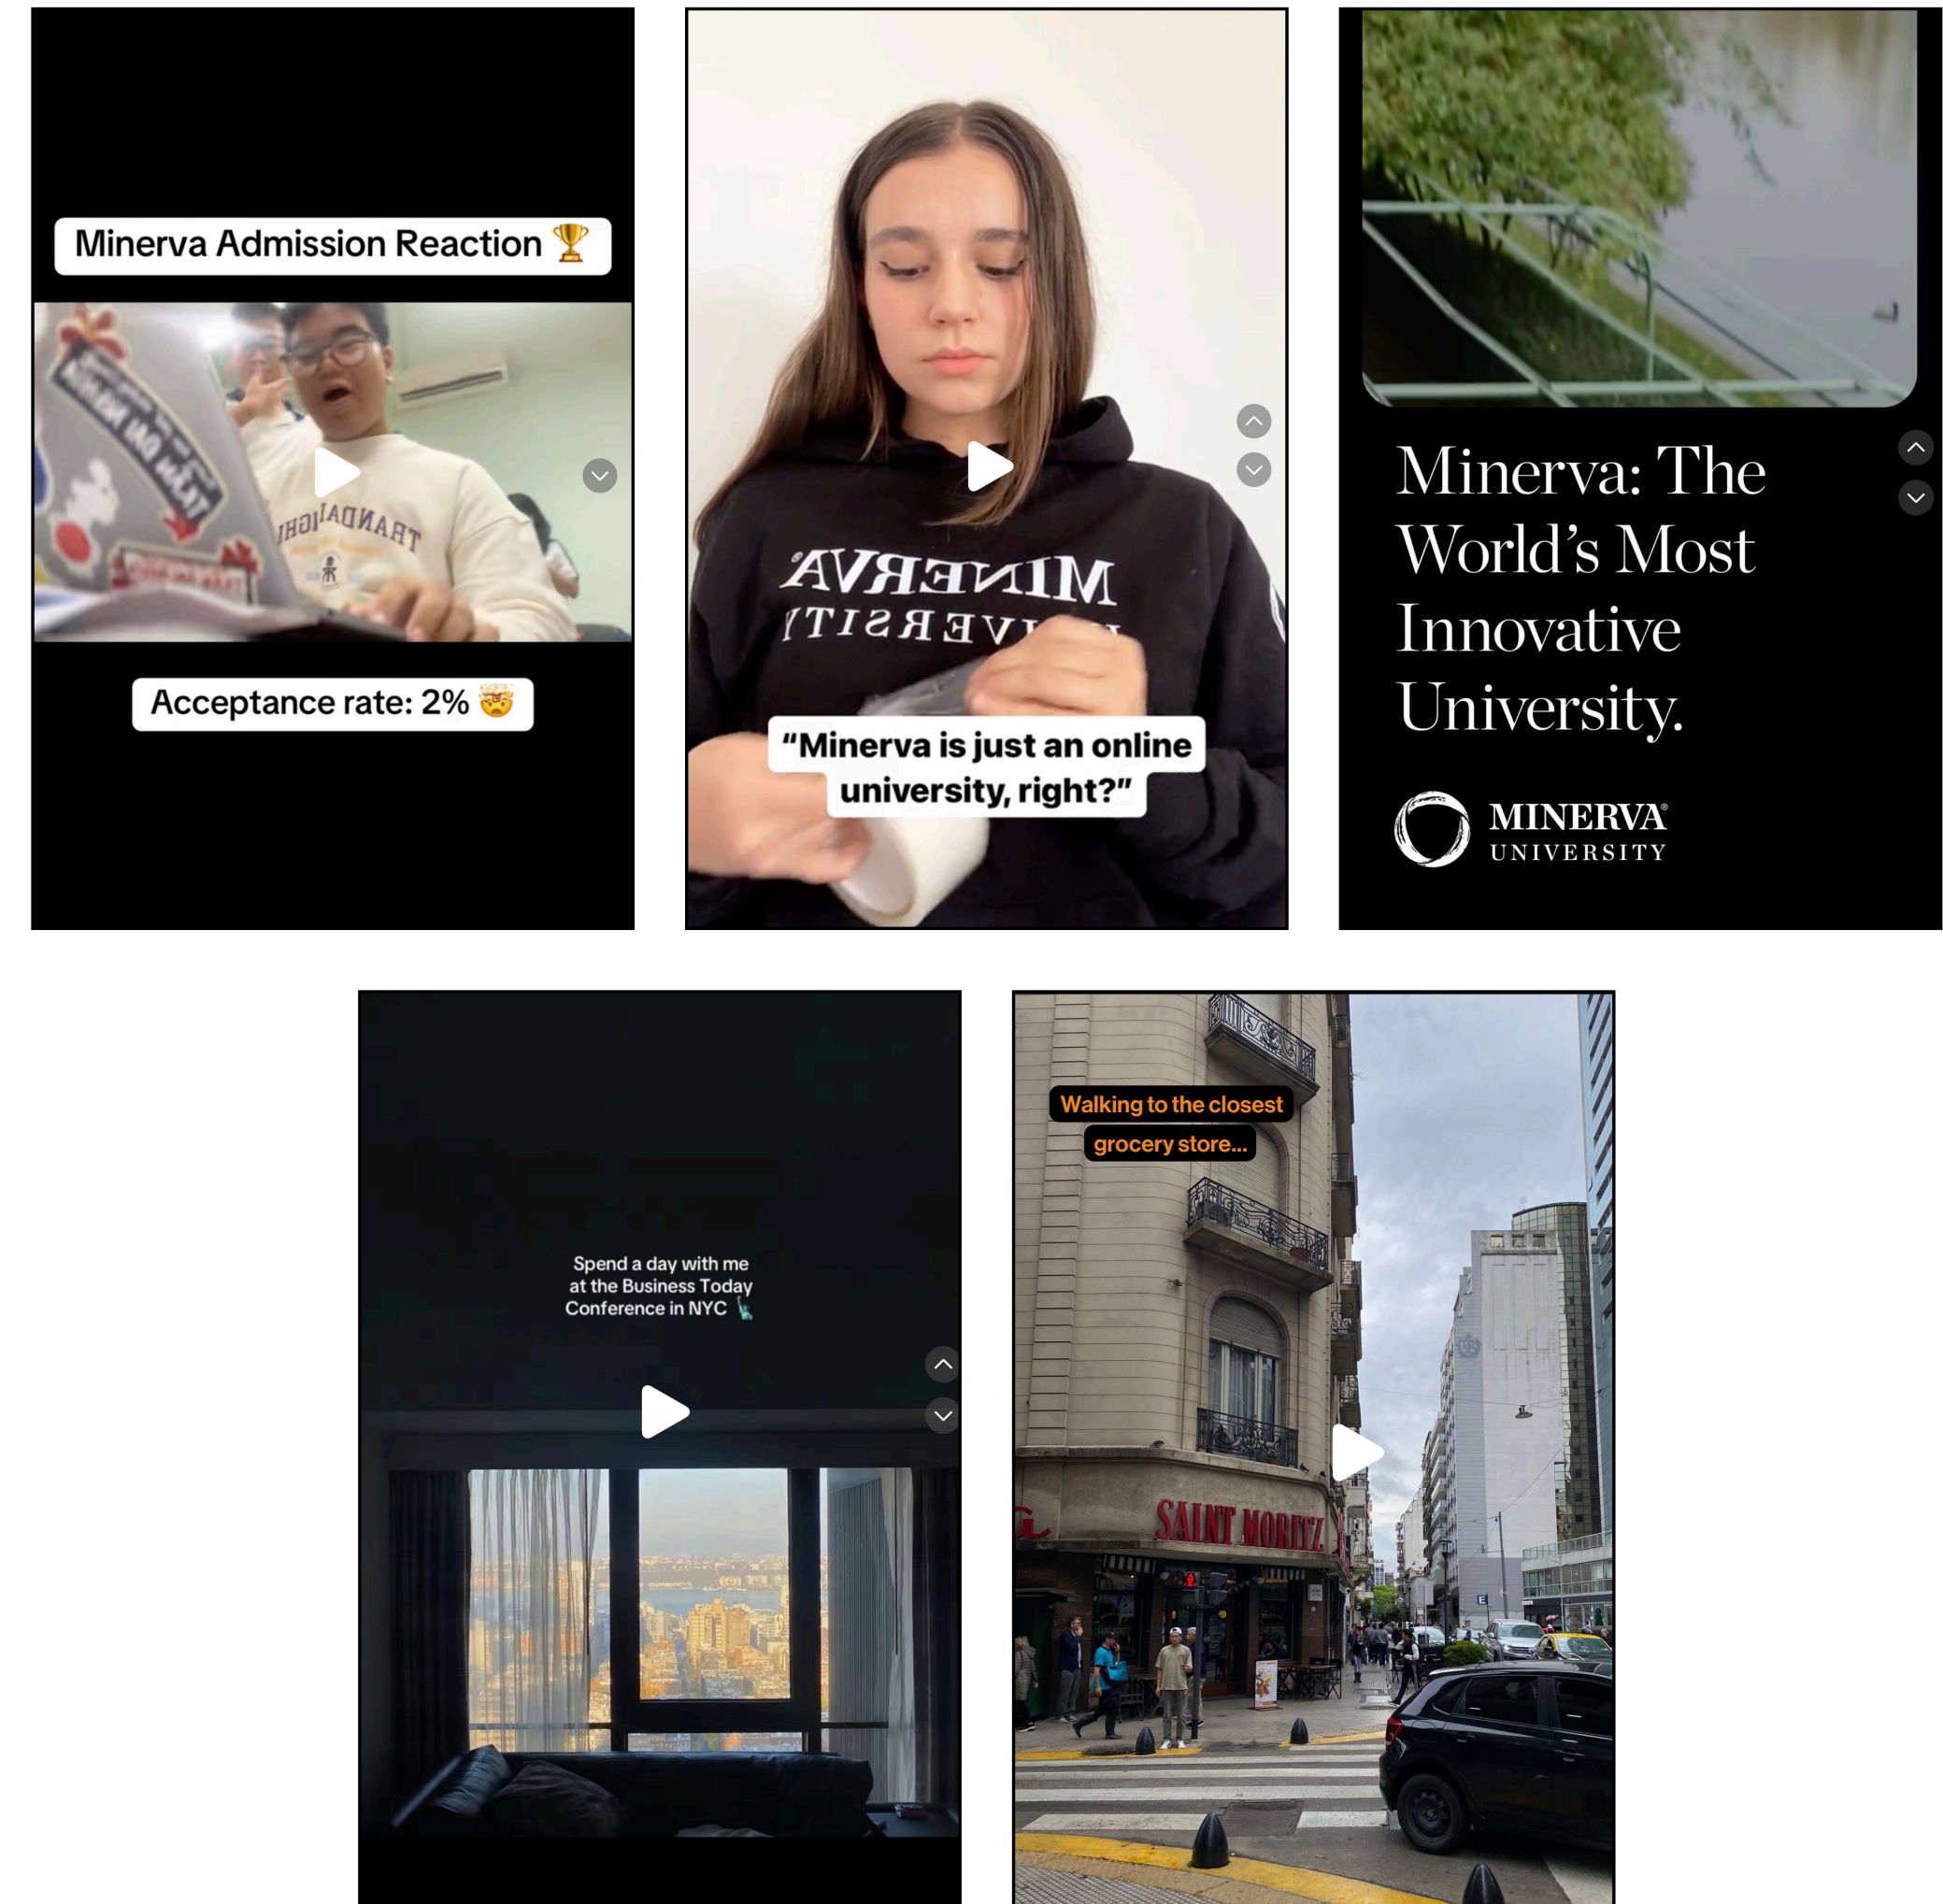

Vertical Video

Vertical video moves fast. It's often viewed on small screens, in bright environments, and without sound. When creating content for TikTok and Instagram, or other social platforms, clarity and accessibility matter more than perfect brand precision.

Not every platform or tool allows for precise color selection. When this happens, aim for brand feeling over brand exactness, with accessibility as the priority. When in doubt, neutral colors and clean layouts are always better than low-contrast or overly stylized choices.

If brand fonts or substitutes aren't available, select a simple, sans-serif alternative that is easy to read quickly. Use larger text, generous spacing, and minimal styles to support fast comprehension.

TikTok examples

Photography

Photography Techniques

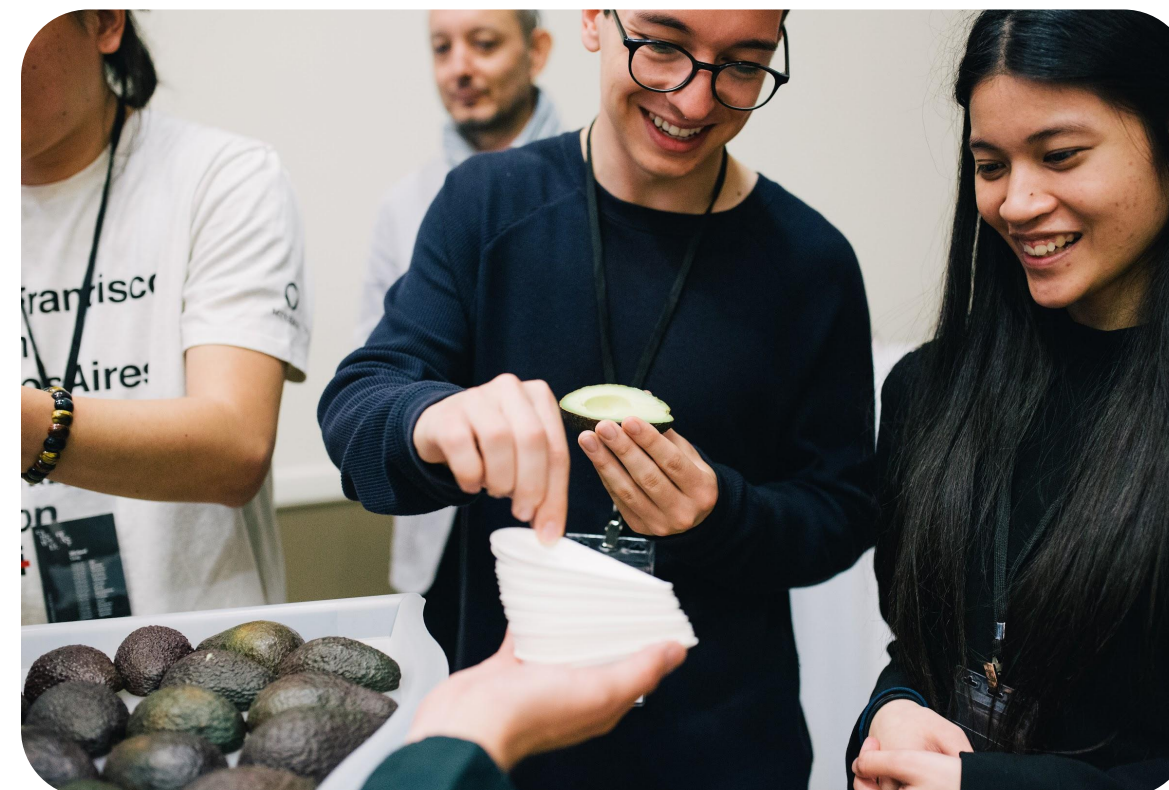

This is one of the most powerful ways we can convey our guiding principles: Human, Unconventional, Driven, Selective, Authentic, Thoughtful, Confident

- Bright, color driven photography helps represent Minerva but also each cities unique culture
- Selective focus (backgrounds are a little out of focus, makes the subject stand out)
- Capture the experience not just the subject ex: Subject captured between the crowd or eye level

Photography Techniques

- Dynamic framing—we use techniques that accentuate the environment or event
- Framing below (empowers subject), eye level (viewer is part of the crowd) creates a dynamic subjects
- Candid photos represent authentic Minerva life

Still Imagery

Perspective & Focal Points

When photographing an event or a gathering of people you want your photos to reflect the energy of the people attending and/or the activities. In order to do this you want to get in on the action. Get at eye level with your subject. Event photos are more engaging when the perspective is coming from the surrounding subjects that you are trying to capture. Crouching down, laying down, or elevating your position in reference to the subject will change the perspective and give the photos different interpretations.

Changing your perspective can shift the visual language and implied power dynamics of the image. Crouching low can make your subject more dynamic, whereas shooting above your subject can minimize their presence in the photo.

In large crowds filling the frame with your subject will minimize the clutter in the background and rain in your focal points. The expressions of the people in your photographs are what makes the photo pop. Focus on a few people at a time. If you try to fit in a full room of people the viewer won't know where to look first and will result in an image that looks messy.

When you want to draw attention to a particular person or object frame you can use the scene around you to draw the viewer's eye to a focal point. (ex: shooting through an archway)

Tight shots bring the focus directly to the action

Crouching down and tilt camera up to create dynamic photo

Focal point captured between the crowd

Still Imagery

Light, Shade, Color & Exposure

Before you frame your shot, check to see where your light is coming from. Whether you are working with natural light (sun), or an artificial source (overhead lighting); you can use these to your advantage. Note how the light is interacting with the scene and the subject. Is it highlighting an area or casting interesting shadows? Avoid shooting into the sun unless you purposefully want to capture silhouettes or sun flares. If possible, use shadows and highlights to your advantage. Taking time to note these factors before hand can create a more dynamic photograph.

If you are outdoors and shooting midday the sun can cast harsh and unattractive shadows on your scene. Shade or an overcast day cast an even light are great natural diffusers. If the sun is facing your subject or scene, set your exposure compensation to underexpose by a stop to even out the tonal range. If the sun is behind the subject or scene, slightly over expose to lessen the shadows on your subjects faces.

When possible, predominantly focus on one or two colors in your photograph. This will set the tone of the image and scene. Photographs featuring too many colors can make it difficult for the viewer to focus on, unless the color usage is intentional like Pride or Mardi Gras.

Shadows and highlights used to your advantage

Overcast day creates an even tone over the subjects

Blues and grays bring unity to an otherwise chaotic background

Still Imagery

Engaging with Subjects

“Make eye-contact, engage and listen to your subject. With the eyes—lower that camera and be human. Bring the camera up for a decisive shot. But remember to lower it, like you’re coming up for air, to check in with your subject. Don’t treat them like a science experiment under a microscope. Being there with your subject shows them respect, levels the playing field in terms of power dynamics, and calms them down. You’ll get much more natural images this way.”

Heather Faulkner

Warm and comfortable body language

The goal is to make everyone feel comfortable

Portraits are a great place to practice talking to your subjects

Still Imagery

Technical

If you are shooting outside during the middle of the day you will need to use a lower ISO such as 100 or 200. If you are shooting in the evening without a tripod you will have to increase the ISO to a higher number to be able to record the light on the camera's sensor.

Will the subject be well lit? If your subject or scene is too dark you will need to use a higher ISO such as 800 or 1600.

Do you want a sharp image or an image with more movement in it? Using a high shutter speed to capture fast movement might mean that you need to use a high ISO to compensate. Likewise, if you're using a slow shutter speed to capture blur you will need a low ISO to compensate.

Increasing your ISO increases the grain or pixel size in your photo. So don't use an ISO of 3200 or 6400 if you don't want a photo with a lot of 'digital noise'.

Lower ISO

Higher ISO

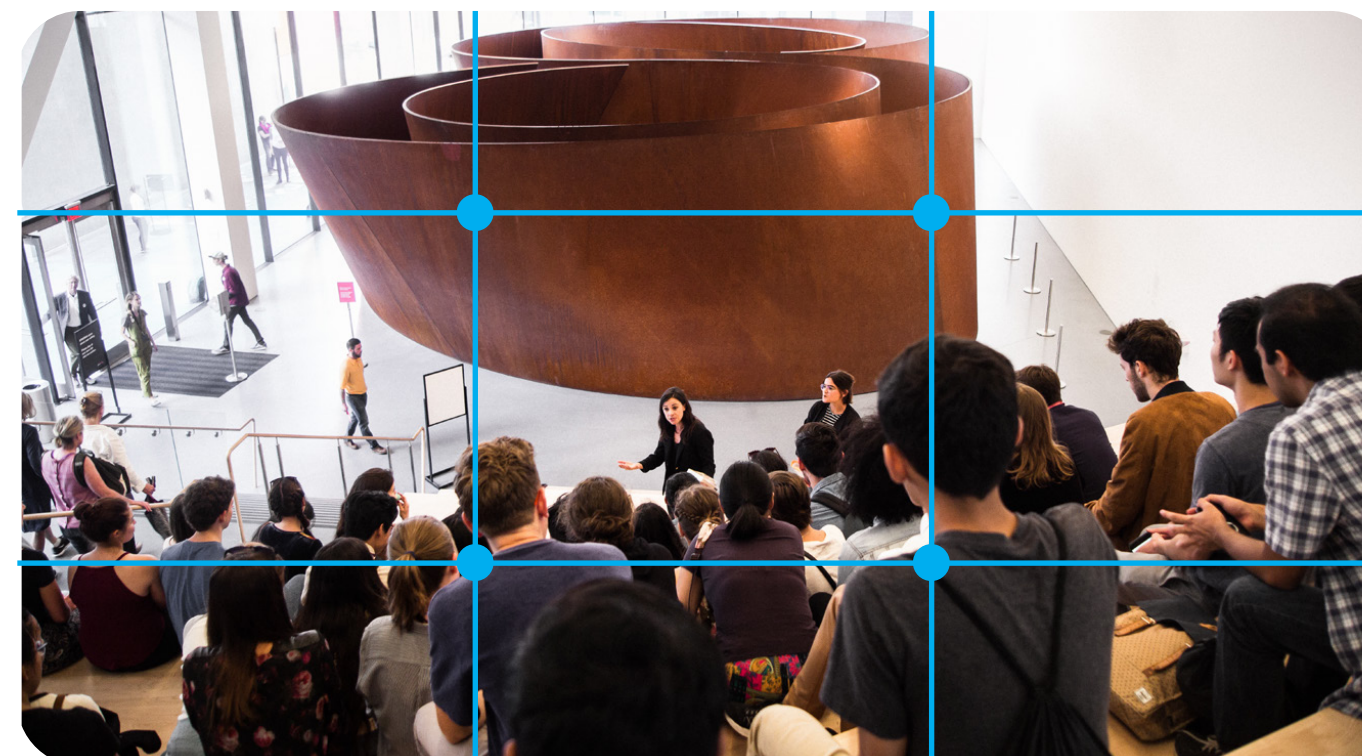

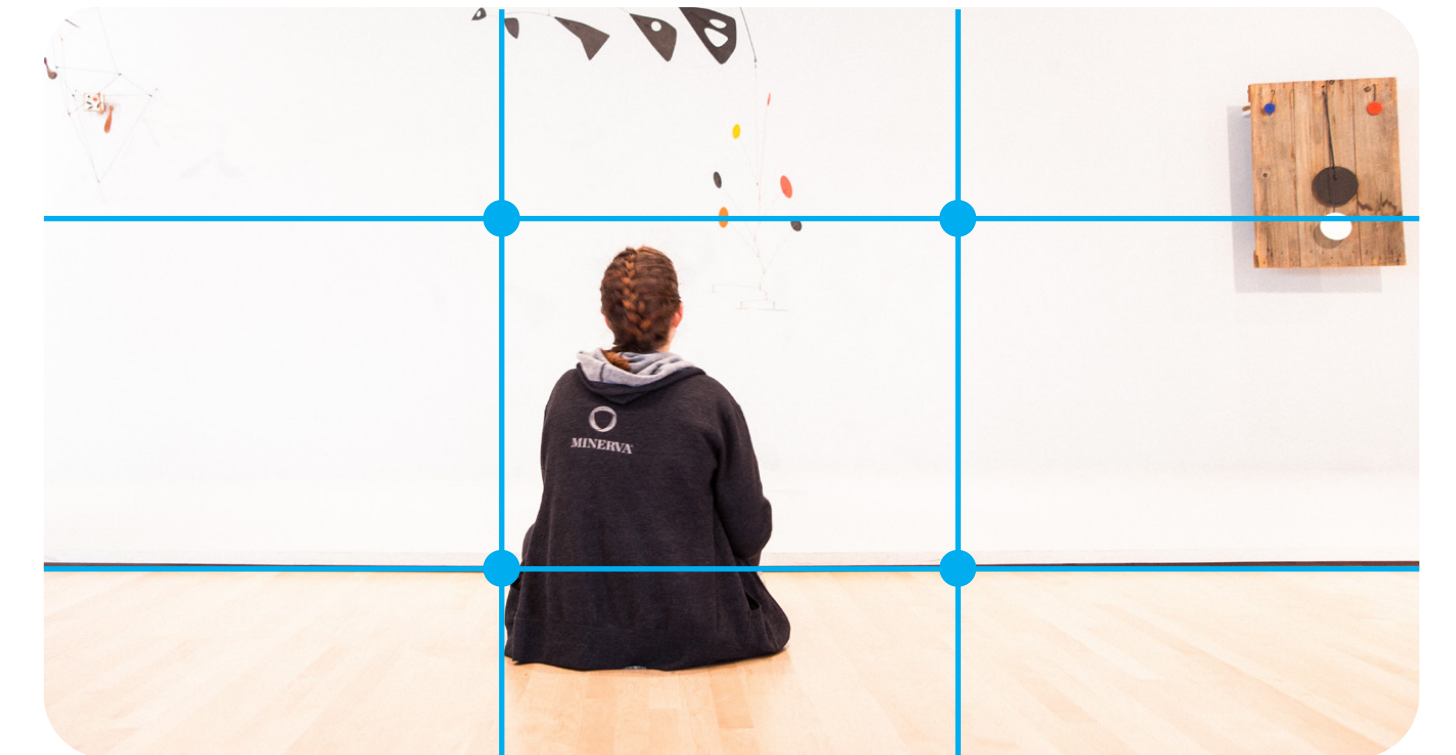

Low ISO combined with slow shutter speed

Still Imagery

Grids: The Rule of Thirds

When framing a photo decide what the most important element is. Imagine the scene divided in vertical and horizontal thirds. Then position that important element in the cross sections of the grid. They don't have to be perfectly lined up as long as they're close, your results will be the same. Move around to get the best composition. This forces you to think more carefully about the shot, and is a good habit to get into whether you're using the rule of thirds or not.

In landscape shots, it's common to position the horizon along the centre of the frame, but this can give the photo a "split in two" feel. Instead, place it along one of the horizontal lines in your grid.

Still Imagery

Backgrounds

Pay attention to background clutter but also look for background elements that might interact with your subject in a negative way.

Use your environment to your advantage. Your background is a big part of the visual language in your photography. Feature major city landmarks to highlight the program's global presence. Select subjects that reflect the diversity of our students.

Capture your
subject's lifestyle

Avoid spears
going through your
subjects head

Background
elements
reveal context

Using Images and Text Together

When combining photos and text, it's important to ensure they complement one another both visually and in meaning. Text should always be placed in a way that keeps it legible and accessible, which means choosing photos with sufficient contrast in the area where the text appears or using overlays and backgrounds to maintain readability. The color, size, and weight of the text should be selected to meet accessibility standards, so users can easily read it regardless of the image behind it.

Beyond legibility, the photo and text should support the same message, so choose imagery that reinforces the content rather than distracts from it. Thoughtful composition and layout are key; align text with clear or neutral sections of the image, avoid covering essential visual elements, and ensure the overall design feels cohesive and intentional.

When possible, place text and logos over areas of the photo that has a sufficient background for readability.

For busy photos, add a layer of Charcoal color over the photo with an opacity between 50-75%

For photos that don't need to be entirely visible, place a color gradient across the photo and place the majority of the text where the color is opaque.

“Legacy” Photos & Icons

The Legacy system provides a foundational sense of identity and community for all students, faculty, and staff. Each individual is assigned to a Legacy and every Legacy is named after a distinctive San Francisco landmark (e.g., Civic, Mission, Octagon, Pier, Triangle, Cable). These landmarks inspire the visual textures and symbols associated with each group, reinforcing a meaningful connection to place.

Because there are many different icons and photos that represent these Legacies, you can access each of those resources here:

- [Photos](#)
- [Icons](#)
- [Landmarks](#)

The Legacy system fosters belonging through shared experiences and is celebrated in key traditions like Convocation and Commencement, where students wear sashes representing their Legacy.

Graphic Styles, Elements, and Textures

Graphic Styles

Rounded Corner Shapes

Rounded corner shapes are a key visual element in our brand and help reinforce its approachable, human-centered personality. Unlike sharp edges, rounded corners feel softer, more welcoming, and easier for the eye to follow, creating a sense of comfort and connection. To maintain this visual language, any photo that doesn't fill the entire layout should be placed within a rounded-corner rectangle, ensuring consistency across applications. Additionally, incorporating other rounded corner shapes and lines throughout designs helps unify compositions and subtly reflects the brand's friendliness and warmth. By intentionally using these softened forms, we create a cohesive aesthetic that resonates on an emotional level and supports the brand's identity.

Sharp corner shapes should be used when the edges of the graphic or photo extend to edge of the space, bleeding off the page or canvas. The edge that is bleeding off the page should not have rounded corners.

Use rounded corner containers for all photos where the edges are visible

LOREM IPSUM

Lorem ipsum dolor sit amet, consectetur adipiscing elit, sed do eiusmod tempor incididunt ut labore et dolore magna aliqua. Ut enim ad minim veniam, quis nostrud exercitation ullamco laboris nisi ut aliquip ex ea commodo consequat. Duis aute irure dolor in reprehenderit in voluptate velit esse cillum dolore eu fugiat nulla pariatur. Excepteur sint occaecat cupidatat non proident, sunt in culpa qui officia deserunt mollit anim id est laborum.

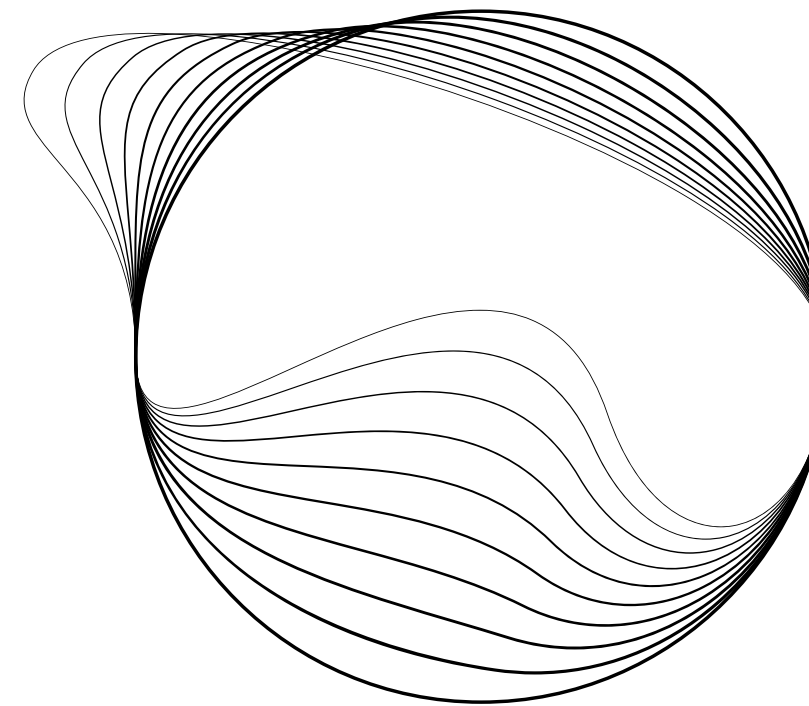

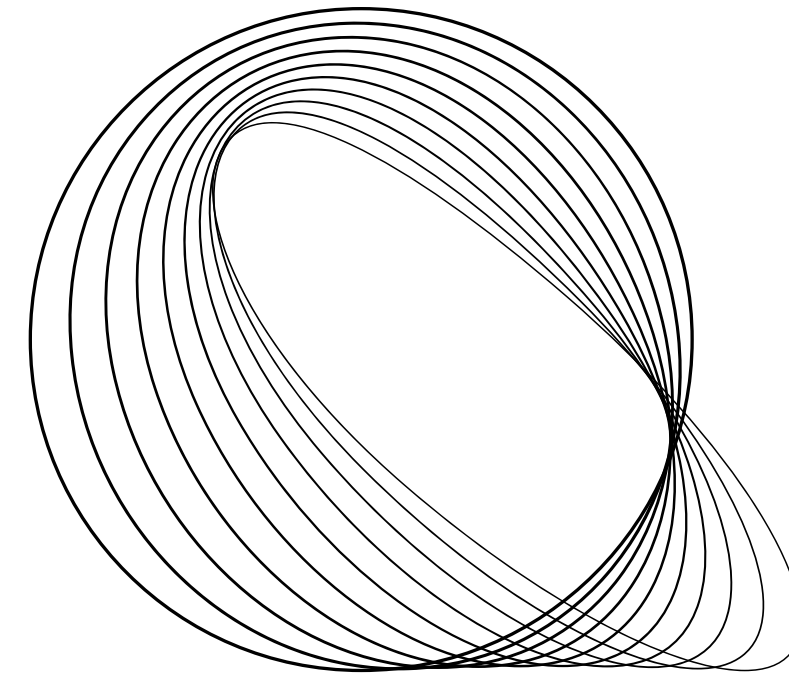

Areas of solid color behind text can be used with rounded corners if the application permits

Use thin or thick rounded corner lines for an additional design accent

Graphic Elements

Circular Lined Shapes

As an additional graphic element, you may use these circular lined shapes to add interest and movement to your designs. Their fluid, continuous curves suggest a sense of motion and connection, creating an impression of forms that evolve and flow without interruption. These elements can appear to shift and interact across brand materials, reinforcing themes of perpetual energy, seamless integration, and expansive possibility.

Minerva Names and Trademarks

Minerva names and logos are registered trademarks of Minerva Project. This includes the Minerva University name and logos.

The following names and trademarks are approved for use by Minerva University: Minerva University®, Forum™, and Minerva®. Use of these trademarks requires simple identification upon first mention, as follows:

The Minerva University name should be followed by the “®” trademark registration icon upon first mention in any written text (i.e., Minerva University®) — unless it is preceded by, or in close proximity to, the Minerva University logo artwork, which includes the registered trademark icon. Usage after the first mention may omit the icon and may also be shortened to Minerva alone.

The name of the software platform, Forum, should include the “™” mark upon first mention in any form (i.e., Forum™). Usage after the first mention may omit the symbol.

The Minerva University name should not be translated to other languages (e.g., Universidad Minerva) because such uses are not protected under trademark law.

Partner Support Descriptors

Minerva University has many different relationships with third-party organizations, which are broadly termed “partnerships”. Such partnerships include alliances with other academic institutions, businesses, research institutes, not-for-profit organizations, philanthropic foundations, among others.

To accommodate this range of partnerships, Minerva University offers the four types of support descriptors shown at right. The structure of these descriptors is intended to give the partner name primacy, while avoiding the implication that Minerva University endorses the partner organization.

Only one descriptor type should be used with each partner. If the organization provides multiple types of support, use the Preferred Level Support descriptor.

Minerva University partners should not be allowed to use Minerva logos or trademarks for their own promotional purposes, nor should Minerva University explicitly or implicitly endorse the quality of other academic institutions.
